In-patient Ward :

The IP department has started functioning from 01.06.05 and bed strength has been increased to 160 bedded hospital.

Eco friendly campus

1. The campus is eco-friendly. This is an exceptional project to have created a man-made pond in an institutional premise as a water conservation measure. A sewage recycling plant provides water for the herbal garden.
2. Solar energy is being tapped to heat 12,000 litres of water every day, by using solar panels. It is proposed to develop the hillock behind the campus into a groove of medicinal plants.

The National Institute of Siddha has necessary infrastructure, qualified faculty members and other non - teaching staff. This Institute is poised to establish the glory of Siddha system so that the system can play a major role globally in the field of health care.

Growing of the medicinal plants and trees

It has been decided to cultivate and grow the medicinal herbs/trees and potted plants in the campus of National Institute of Siddha. Presently 70 medicinal plants are being grown and maintained in NIS campus and planting 270 more such plants in this scheme is under way.
