	Total	45 + 1

+ 1 for BIMSTEC Candidate

VI. Research:

Although long historical use of many practices of Siddha medicine including experience passed on from generation to generation, has demonstrated the safety and efficacy of siddha medicine, it is important that, we present the scientific evidence and demonstrate the advantages of such products as described in the ancient text. It is the duty of researchers and academicians to establish the strength of siddha by scientific studies. The quantity and quality of the safety and efficacy data on siddha are far from sufficient to meet the criteria needed to support its use worldwide.

The research methodologies for evaluation of Siddha is to guarantee the safety and efficacy of medicines and procedure-based therapies. The siddha medicine relies on a

holistic approach, efficacy assessment may be quite different to that of conventional medicine.

National Institute of Siddha is making strenuous effort in improving the quality of dissertation work of P.G. Scholar by scrupulously following research methodologies, so as to strengthen the clinical validation of siddha.

The faculty members are undertaking collaborative research work with MoU signed institutions for pre-clinical studies and clinical studies.

All research activities are undertaken with approval of Research Committee followed by Institute Ethics Committee / Institute Animal Ethics Committee.
